INTRODUCTION

This plan is a detailed and comprehensive account of all present and future management issues for Top Field and Cozens Grove Local Nature Reserve between 2024-2028.

The Management Plan aims to ensure that the improvements and sustainability of the site take place in a well planned and structured manner and that resources are used to maximise effective outcomes which fully achieve the vision, aims and objectives.

1.1 Vision Statement

The Borough of Broxbourne and the Friends of Wormley Open Spaces' (FOWOS) vision for Top Field and Cozens Grove Local Nature Reserve is that it is a safe, clean and welcoming space that engages people from both the local and wider community. Top Field and Cozens Grove Local Nature Reserve will provide an environment where interpretation and a range of educational activities enable park users to discover the heritage, historical features, natural flora and fauna, all contained within this green space. The site will be used as an engaging backdrop to a variety of tasks, events and activities throughout the year. The Borough recognises that providing a high quality Green Flag Community Award-winning site improves the immediate location to live, work and visit, and that it can help to promote and encourage a healthier lifestyle within a natural environment. All Borough residents are encouraged to take up volunteering opportunities on offer at Top Field and Cozens Grove Local Nature Reserve and other local green spaces and assist the Borough of Broxbourne with maintaining and managing them.

This five year Management Plan will look at where the park is at the current time and establish where we would like it to be in five years time. The Plan will then ensure that the improvements are well organised, structured and sustainable, with all resources clearly identified. The Plan details how the Borough and FOWOS aim to protect, maintain and improve Top Field and Cozens Grove Local Nature Reserve for the benefit of the community.

1.2 Period of the plan and stages of review

This Management Plan covers the five year period from 1 January 2024 to 31 December 2028. This plan is a guide to decision-making for the park and will remain in circulation until the end of 2028. The Plan is map-based with action plans for each year and is produced annually at the end of year review. In January each year, the previous year's action plan will be fully updated and moved to the appendices and the action plan for the coming year will be inserted. The Green Spaces Officer will review and update the Plan each quarter. It is accepted that the Plan is a working document that may need to react any change of circumstances within the Borough of Broxbourne.

Reviews are carried out by the Management Plan Review Group listed below:

- Green Spaces Officer
- Friends of Wormley Open Spaces
- Arboricultural Officer
- Green Spaces Manager

1.3 The Friends of Wormley Open Spaces

For a list of the Friends' achievements please see Appendix 7.1

1.4 Friends of Wormley Open Spaces Logo

In 2018 the Friends commissioned a painting from local wildlife artist Maurice Pledger, and it was turned into a logo by his son, Douglas Pledger.

2. THE EXISTING LOCAL NATURE RESERVE (LNR)

2.1 Vision Statement

Top Field and Cozens Grove Local Nature Reserve is an area of 5.7ha and is part of the larger area known as Wormley Open Spaces, which includes Wormley Playing Fields, Church Lane Allotments, a par 3 golf course and another natural area known as Lower Field. The area is also shaped by the more recent addition in the 1970s of the A10 which forms the western boundary of the site. The northern boundary is the housing estate, Baas Hill Close. The eastern boundary is Broxbourne School and on the southern boundary is the par 3 golf course.

The site is divided into three distinct areas:

- 1) Top Field was originally part of the Manor of De Baa, a working farm in the area pre-1900, and was declared a Local Nature Reserve on 30 November 2005. Top Field is a semi-improved neutral grassland with some wet patches. The area was previously dominated by false oat grass but recent management has started to see significant improvement and the site is being maintained as a summer flowering meadow.
- 2) Cozens Grove is a small area of hornbeam woodland, unchanged in extent since 1883. The woodland has benefited recently from the addition of two small woodland extension areas, scalloped to create a natural effect. Species planted include oak, ash, hazel, guelder rose, sallow, hawthorn and hornbeam. The quantity of hazel is approximately 25 per cent, with the aim of benefiting small mammals. Widening and lengthening the margin between woodland and grassland supports a woodland edge plant community and rich associated communities of animals and invertebrates.

The woodland, which would have been more extensive than at present, was used as the heating supply for the area; the evidence of ancient coppiced hornbeams substantiates this. In September 2013 Cozens Grove was registered under the Good Woods project and, after receiving a visit from a Forestry Advisor, it was awarded a bronze standard certificate, and advice and guidance has been offered to develop the grove to a silver standard. The report contains the following paragraph:

"Cozens Grove is mainly a remnant hornbeam coppiced woodland with English Oak standards. A bare ground field layer with occasional holly, hawthorn and blackthorn shrub layer apart from on the edges of the woodland. New planting has been added to the northern and western edges, creating a diverse age structure over the past 15

years using a mainly native mixture of shrubs and trees. There is an ancient sunken land, ditch and bank feature running along the southern edge of the woodland, which is thought to be medieval and an old drovers' route, part of which can also be found on Baas Hill Common. The woodland has a healthy bird population with many small species of tits breeding on the site, which also indicates good insect populations. Many of the English Oaks have veteran tree features of holes and hanging bark, which contribute greatly to the nesting habitat for woodpeckers and the presence of species requiring deadwood habitat."

3) The sunken road (Restricted Byway 40), which is a pre-medieval road, leads through Broxbourne Woods. A site survey was carried out by Enfield Archaeological Society on 29 November 2009, with their findings suggesting it was originally part of Cozens Lane West. Modern maps show the stretch as straight but a map by A. Bryant dated 1822 shows the section as having a distinct 'doa leg' with an angle close to 90 degrees. A faint negative parch mark in the playing field to the south of the section indicates it was straightened some time after 1822. The road originally began in the east at the Lea navigation, crossed the London/Hertford coach road (A1170) and continued west, crossing the New River and at Baas Common joined the road represented by the modern Baas Hill and Bell Lane. The route then continued due west, intersecting the line of Roman Ermine Street at right angles and continuing beyond it. From Cozens Grove westward towards the A10 this disused section of sunken roadway probably therefore represents the form which Cozens Lane took prior to modern development and the fragmentation/straightening of the original road line.

The path is flanked by distinct raised banks topped by established hornbeams. The form suggests the roadway, and so presumably all of Cozens Lane, may have originated as a sunken "hollow way", conceivably used at least partly as a droveway. At least two successive surfaces, one of cinder and one of clinker, may date back to the 18th or 19th century. It is not unreasonable to assume that the roadway is medieval in origin but this is archaeologically difficult to demonstrate. The route clearly represents a link between the River Lea and areas of its valley to the west and, as such, probably served a variety of functions which could have included the distribution of goods and droving of livestock from water meadows near the Lea, conceivably to connect with routes such as Ermine Street to London.

The survival of this section of Cozens Lane is of interest but cannot claim to be unique. If it is possible to maintain it in its present form it would serve to illustrate a neglected but important aspect of the appearance and functioning of the pre-modern landscape.

Pinchbeck, N (2009) (ed Dearne, M.J 2009) Preliminary investigation of an abandoned section of a sunken roadway at Cozens Grove, Wormley, Herts. November 2009 (Enfield Archaeological Society archive note).

2.2 Operational Overview

The Local Nature Reserve (LNR) is an open green space and not subject to locking. Although security issues can be of concern, regular patrols by the Friends group members, GSO and Parkguard have helped to reduce both actual and perceived problems including illegal motor/trail/quad bike usage.

To support these patrols, Parkguards' contact details have been distributed to enable members of the public to access support if required. This is in addition to the local Police Community Support Officers and non-emergency contact numbers for appropriate emergency services. Local residents and members of the Friends Group also have contact details for the Green Spaces Officer.

Maintenance and management operations

The LNR ground maintenance service provider is currently the Council's Environmental Services department. The majority of the area is a summer flowering meadow which is cut and lifted by an external contractor at the end of the season (end July/early August). The paths and main entrance are maintained as standard grass, with arisings cut and spread. The grass specification is available to the public on the Council's website.

https://www.broxbourne.gov.uk/residentenvironment-grounds-maintenance/grassmaintenance

Environmental sustainability

As part of the Council's commitment to environmental sustainability the Council ensures that its vehicle fleet is fuel efficient and maintained for optimum performance.

All material felled on site is chipped onto woodland paths, floor or left as log piles. Leaves are collected from formal grass area and strewn through woodland area ensuring no need for removal from the site.

An annual hay cut is carried out is carried out in the Top Field section of the site.

The Borough of Broxbourne adopted a new environmental sustainability strategy in July 2021: www.broxbourne.gov.uk/downloads/file/1859/environmental-sustainability-strategy-2021-2025

The Council has a Pesticide Policy (Appendix 7.2)

The control of Ragwort has become a significant problem within the meadow area of the LNR and volunteering tasks to hand-pull over the last ten years has not resulted in any improvement. It has been deemed necessary and appropriate to try using a glyphosate herbicide to spot spray individual rosettes by a qualified person in a designated area (approximately 20% of the meadow). Volunteers will continue to hand-pull the remaining 80%. This will be then monitored annually to see if a significant reduction is recorded.

2.3 Public Space Protection Order Control of Dogs

In 2020 the Borough of Broxbourne adopted the Public Space Protection Order for the Control of Dogs. This requires owners of dogs to clear any faeces up, and in specific locations including fenced play areas, dogs are banned (see Appendix 7.3). Bagged dog waste can be disposed of in any litter or dog waste bin in the Borough.

In 2016 the Council removed some litter and dog bins and installed combined waste bins throughout the Borough including Top Field and Cozens Grove LNR. These bins are scheduled to be emptied twice weekly.

2.4 Works Carried Out Under the Grounds Maintenance Service Standards Include:

- Annual hay cut
- Maintenance of grass paths and entrance points
- Maintenance of standard grass
- Maintenance of furniture
- Leaf clearance
- Emergency tree work
- Planned tree works
- Graffiti removal
- Litter control
- Twice-weekly emptying of combined waste bin
- · Maintenance of combined bin.

Volunteer works by Friends of Wormley Open Spaces include:

- Tree planting
- Weeding
- Mulching

- Making bird boxes
- · Scrub control
- Funding applications
- · Reporting issues
- Litter control
- Ragwort control
- Community liaison
- Newsletter production/distribution
- Green Flag Community Award applications.

Public use of the LNR

The LNR is well used by members of the public for informal recreation and quiet enjoyment. It is popular with local dog walkers and joggers. The local scout group uses the area for a variety of activities and there are two geocache boxes hidden on site which have encouraged new users to the area.

2.5 Planning Context

Metropolitan Green Belt (MGB):

Top Field and Cozens Grove is covered by the Metropolitan Green Belt (MGB). The construction of new buildings within the Green Belt is generally considered to be inappropriate. Exceptions to this are set out in the National Planning Policy Framework (NPPF). As per Policy GB1: Green Belt, the Council will consider applications within the Green Belt in line with the provisions of the National Planning Policy Framework.

Open Space:

Top Field is designated as a Borough Level Park in Appendix A of the Broxbourne Local Plan 2018-2033 under Wormley. Policy ORC2: Loss of open space, Leisure, Sport and Recreational Facilities states that the park will be will be protected from development unless the following criteria is met:

- (a) An assessment has been undertaken, which clearly shows the open space, facility, buildings or land to be surplus to requirements; and
- (b) The development is for alternative sports and recreational provision, the needs for which clearly outweigh the loss; or
- (c) The loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location.

Cozens Grove is not covered by an open space designation.

Wildlife Designations:

Local Wildlife Sites (LWS) are identified by the Hertfordshire Local Wildlife Sites Partnership, coordinated by the Herts and Middlesex Wildlife Trust. Local Wildlife Sites are considered to be of significance for wildlife in at least a district context.

The entire site (both Top Field and Cozens Grove) is designated as an LWS under Top Field and Cozens Grove 72/050.

3. VISION, AIMS AND OBJECTIVES

Current site

Hay meadows and flower rich pastures provide a breeding and feeding habitat for many species of birds, small mammals and invertebrates. They are a traditional and much loved aspect of the English countryside landscape, which inspires writers and artists, and are highly valued for aesthetic appeal. The meadow at Top Field and Cozens Grove Local Nature Reserve (LNR) is managed in such a way as to turn previously neglected grassland into a summer flowering meadow containing a rich array of plants. The grassland here has been categorised as semi-improved.

Semi-improved grasslands have usually been treated with low doses of herbicide and inorganic fertiliser (previous use as an allotment site would substantiate this). They retain some of the species associated with unimproved grassland, although they are likely to have lost the more specialised and rarer species. Approximately 80% of all grassland in Hertfordshire has been substantially improved for agriculture or amenity use. Four per cent remains totally unimproved and has a high ecological value. Of the remaining 16%, semi improved site-neutral grassland makes up approximately three quarters, with the rest being acidic or marshy grasslands. The meadow at Top Field therefore, although not unique, is still a significant site of wildlife interest and importance. It is hoped that The Friends of Wormley Open Spaces, working with Broxbourne Council, can restore the area to more species-rich grassland by reinstatement of an appropriate management regime. The implementation of these actions will see some significant improvements in the medium term and restoration to a full summer flowering meadow in the long term. Some success has already been achieved by the introduction of four new species. Top Field is cut and baled for hay in July and August and this less frequent cutting has created diversity and encouraged a greater variety of invertebrates and plant species. The site also contains a small woodland area called Cozens Grove which contains mainly Oak and Hornbeam. Several ancient coppice stools line the sunken road. There are hedgerows along the eastern and western boundaries. The meadow is edged and dissected with mown grass paths to add extra habitat.

A recent Heritage Lottery Fund (HLF) project enabled new signage and interpretation panels to be designed and installed around the site, along with the creation of a circular walk, with an accompanying leaflet linking nearby Baas Hill Common. As part of the project tree works have also been undertaken to improve the structure of the woodland and open up the old roadway. The HLF project has helped to

enhance the site and enabled the public to be more informed of the site's history and the flora and fauna they may encounter during their visit.

Aims and objectives

The Management Plan seeks to set out a structured framework for the overall management of the LNR for the five-year period, 2024-2028. The Plan is laid out against the eight key points used as judging criteria for the Green Flag award scheme, which is the industry benchmark of parks reaching and maintaining a high standard in the following categories:

- 3.1 A welcoming place
- 3.2 Healthy, safe and secure
- 3.3 Clean and well maintained
- 3.4 Environmental management
- 3.5 Biodiversity, landscape and heritage
- 3.6 Community involvement
- 3.7 Marketing and communication
- 3.8 Management.

Each of these categories has been given a main aim with key objectives towards meeting that aim. The actions required to fulfil the objectives and meet the aim are laid out in section four. The action plan for each current year is also listed as a table and updated annually, with previous and subsequent years pictorially represented in a map based format within the appendices.

3.1 A Welcoming Place

Green flag criteria

- Welcome
- Good and safe access
- Signage
- Equal access for all.

Aim: To ensure that Top Field and Cozens Grove Local Nature Reserve continues to be a clean and safe environment for the whole community to meet, socialise, exercise, learn, play and enjoy.

Objectives:

- 3.1.1 To ensure all entrances are welcoming, clean and aesthetically pleasing.
- 3.1.2 To provide and maintain suitable notice boards and signage at entrances and points of interest around the site.

3.1.3 To continue to improve the path network, making it as accessible as possible for all users.

3.2 Healthy, Safe and Secure

Green Flag criteria

- Appropriate provision of quality facilities and activities
- · Safe equipment and facilities
- Personal security
- Control of dogs/dog fouling.

Aim: To implement measures at Top Field and Cozens Grove Local Nature Reserve to ensure a safe and comforting experience for visitors and staff.

Objectives:

- 3.2.1 To ensure openness across the LNR by providing high levels of visibility
- 3.2.2 To ensure site facilities and any equipment is safe for use
- 3.2.3 To ensure safety of volunteers undertaking tasks on-site
- 3.2.4 To ensure vandalism and offensive graffiti is dealt with promptly
- 3.2.5 To ensure all dog owners comply with dog control requirements
- 3.2.6 To improve the boundary aesthetics and security.

3.3 Clean and Well Maintained

Green Flag criteria

- · Litter and waste management
- Horticulture maintenance
- Arboricultural maintenance
- · Building and infrastructure maintenance
- Equipment maintenance.

Aim: Seek to continually raise and maintain standards within Top Field and Cozens Grove Local Nature Reserve.

Objectives:

- 3.3.1 To ensure all waste is appropriately disposed of
- 3.3.2 To ensure the treescape of the site is kept healthy, safe and maintains the original landscape
- 3.3.3 To ensure horticultural standards are maintained within the resources available
- 3.3.4 To ensure park cleanliness is maintained to specified standards.

3.4 Environmental Management

Green Flag criteria

- Managing environmental impact
- Waste minimisation
- Chemical use
- · Climate change adaption strategies

Aim: To reduce Top Field and Cozens Grove Local Nature Reserve's carbon footprint, improve its biodiversity and reduce wastage of natural resources.

Objectives:

- 3.4.1 To ensure the biodiversity of the site is maximised
- 3.4.2 To improve resource management
- 3.4.3 To keep pesticide usage to a minimum
- 3.4. 4 To ensure all organic waste materials leaving the park, is kept to a minimum
- 3.4.5 To ensure council vehicles used in the site are used in the most sustainable way
- 3.4.6 To ensure waste collected from bins is disposed of in the most sustainable way.

3.5 Biodiversity, landscape and heritage

Green Flag criteria

- Management of natural features, fauna and flora
- Conservation of landscape features
- · Conservation of buildings and structures

Aim: To maintain the historic character of the landscape, buildings and features and wildlife interest of Top Field and Cozens Grove Local Nature Reserve.

Objectives:

- 3.5.1 To maximise Top Field and Cozens Grove Local Nature Reserve's potential as a site of historic interest
- 3.5.2 To maintain the landscape features in a manner sympathetic to the history of the site
- 3.5.3 To continue to record the flora and fauna on the site
- 3.5.4 To maintain existing and create new habitats where appropriate
- 3.5.5 To ensure the importance of the sunken road feature is recognised and understood by visitors
- 3.5.6 To continue to maintain the link between

Top Field and Cozens Grove Local Nature Reserve and Baas Hill Common and carry out historic landscape refurbishment consistent with the wider original landscape.

3.6 Community Involvement

Green Flag Criteria

- Community involvement in management and development
- Appropriate provision for community.

Aim: To fully involve and utilise the local community, the wider community and other users to gain support and assist with the development and delivery of the Management Plan.

Objectives:

- 3.6.1 To engage with the users of the site and the Friends of Wormley Open Spaces on the management of the site
- 3.6.2 To further develop the volunteer programme increasing volunteering opportunities and community activities
- 3.6.3 To maximise financial support from community donations via annual subscription and other means
- 3.6.4 To reduce crime and anti-social behaviour on and around the site.

3.7 Marketing and Communication

Green Flag criteria

- Marketing and promotion
- Appropriate information channels
- Appropriate educational and interpretational information.

Aim: To fully promote the services and events at Top Field and Cozens Grove Local Nature Reserve to users/non users, using all forms of appropriate and available media.

Objectives:

- 3.7.1 To ensure the Council's website is fully updated with the current Management Plan, minutes of Friends group meetings and proposed activities in the park
- 3.7.2 To provide a wide range of activities of interest, importance and benefits to the local community
- 3.7.3 To provide signage, heritage and interpretation panels
- 3.7.4 To raise the profile and importance of the site within the local community
- 3.7.5 To regularly update the Friends of Wormley Open Spaces Facebook page

- 3.7.6 To develop new and maintain existing relationships with community groups, local businesses, schools and other organisations
- 3.7.7 To ensure that Top Field and Cozens Grove Local Nature reserve remains a Green Flag Community Award-winning site and the flag/certificate is on display in a prominent location
- 3.7.8 To support Love Parks Week
- 3.7.9 To keep site notice boards up to date.

3.8 Management

Green Flag criteria

• Implementation of Management Plan

Aim: To continually improve the management of Top Field and Cozens Grove Local Nature Reserve.

Objectives:

- 3.8.1 To seek to deliver the highest standards of management and ensure the highest standards of maintenance are achieved
- 3.8.2 To ensure the Friends of Wormley Open Space and users are kept updated and engaged in the management planning process
- 3.8.3 To ensure service standards are maintained
- 3.8.4 To ensure high levels of communication between management and site users
- 3.8.5 To explore all opportunities for obtaining external funding to assist in the establishment and development of the site.

Fletchers (Trees) Ltd
Countryside Management Service
Parkguard

5.2 Roles/Responsibilities

Reporting anti-social behaviour, planting and plant management, litter collection support, fundraising: Friends of Wormley Open Spaces including Committee.

Community liaison, co-ordination of events/activities, monitoring service performance: Green Spaces Officer.

Tree inspection/tree works: Arboricultural Officer, Fletchers (Trees) Ltd, Hay and grass cutting, litter collection, dog waste services: Environmental Services.

Site security: Committee and Friends of Wormley Open Spaces, Parks Manager, Parkguard.

Consultation, advice and mapping: CMS

5.3 Consultation between staff and stakeholders

There is an active Friends Group that meets regularly with the Parks Manager to oversee the implementation of the Management Plan. On a day-to-day basis, the Friends report any issues or problems either to the Green Spaces Officer, Borough of Broxbourne Helpline, Parkguard or the emergency/non-emergency services (999 or 101).

MAINTENANCE REGIMES

This section of the Plan, in conjunction with the maps in the appendices provides an outline of the operations needed to maintain the various landscape types found in the Local Nature Reserve. All operations are carried out to the standards set out in the Borough of Broxbourne Grounds Maintenance Service Standards.

6.1 Maintenance operations

Current grounds maintenance services in the Borough of Broxbourne are carried out in-house by Environmental Services. Current grounds maintenance operations at Top Field and Cozens Grove are summarised below.

6.2 Grass maintenance operations

Outcome

Clean, tidy and appropriately maintained grass areas.

Tasks

The service provider shall:

• Cut the grass according to the relevant specification, as stated in the Bill of Quantities table below.

Specifications and timings for grass cutting – Top Field and Cozens Grove

	Specification 1 10mm – Box Mow	Specification 2 20mm	Specification 3 25mm	Specification 4 40mm	Specification 5 50mm	Specification 6 2 cuts p.a.	Specification 7 1 cut p.a.
Output tim- ing	10 -25mm Box mow	20 - 60mm	25 – 75mm	40 - 120mm	50 - 200mm	N/A	N/A
Categories	Formal areas Lawns	Football pitches Open spaces Recreation grounds	Verges Open spaces Grass footpaths	Verges	Scrub areas	Scrub areas	Conservation areas Scrub areas Bank areas

- Set cutting heights to achieve the named specification.

 This will mean setting the machines correctly and having different cutting heights throughout the year according to the weather and/or ground conditions
- Immediately report any conditions that prevent the outcome being met or the specified tasks from being undertaken
- Catch up on any work that is behind schedule no later than seven days from the original programme unless specifically authorised by the authorised officer
- Clear arisings if necessary once an obstruction is removed
- Remove any litter prior to cutting (or after cutting if it has not been noticed prior to cutting).
- Remove all arisings from adjacent hard standing as soon as is practicable unless to do so would be hazardous (e.g. on fast moving roads)

- No cutting where bulbs are planted within grass areas, until the plants have flowered and they have died down naturally after flowering. At least six weeks will be allowed for this to occur. After this period, arisings on the immediate patch shall be raked up and removed from site. The area shall subsequently be maintained to the specification of the surrounding grass area
- Always check cutting heights for suitability before any cutting operation, and remove any obstructions from site.
 After cutting the site shall be left clear of unwanted debris and/or litter.

6.3 Hedges

Neat, tidy, vigorous and dense hedges, of an appropriate height and profile for their location. Hedges that retain their barrier or other design intention, in a way that does not obstruct sightlines or overhang footpaths and roads, or encroach onto other maintained areas, unless that is the intention of the design.

Tasks

The Service Provider shall:

- Cut sponsored or high amenity hedges cleanly, and without jagged broken wood or torn bark remaining after pruning operations, at the number of times specified in the Bill of Quantities or Method Statements
- Check to ensure that there are no nesting birds or other protected wildlife in the hedge. In the event that any are found, the Authorised Officer should be informed and the hedge left to be cut
- Maintain the hedge to the height and profile of previous cutting operations. This may require cutting of one or two sides (tops are to be cut in both cases). The service provider may be required to gradually adjust the hedge to a more appropriate height and profile over time
- Treat damage to sponsored or high amenity hedges in a recognised horticultural manner (e.g. by tying in, pruning, staking) within 48 hours of being reported
- 'Tip' any new hedges to encourage dense growth, until they reach the required height
- Hand-weed new unestablished hedges
- Immediately retrain or remove individual rogue side shoots appearing between scheduled cuts that are found protruding from the required shape and form, that are likely to be a hazard. All uncharacteristic (e.g. reverting growth in variegated stock), diseased or dead wood shall also be removed
- Ensure that all clippings and any other unwanted material from work on sponsored or high amenity hedges, including those lodging on the top or in the sides of the hedge, are removed and treated as green waste as far as is practicable. At the end of any maintenance visit, all litter, rubbish and weeds (except when they have just been treated with herbicide) shall be removed from the hedge base leaving the soil surface level and free from litter
- Treat the bases of hedge according to the standard and the location. For example, hedges in formal areas should have a soil-base free from weeds and litter, whereas hedges in scrub areas may have no 'bed' at all. Hedges in formal areas may be regarded as shrubs within a bed to all intents and purposes.

6.4 Site care

The term 'site care' has been used to define a group of related operations that are necessary to keep the sites ready and fit for use. This specification is concerned with removing all unwanted material from the site, whereas nearly all of the other specifications deal with maintaining the wanted material. There is some inevitable overlap; for example the grass cutting specification also refers to the removal of litter prior to cutting grass, but this specification is relevant to the removal of litter at other times, for example, in between grass cuts. This specification also includes work that is necessary to make sure that the site is ready for use, such as looking after street furniture.

Site care specification includes, but is not limited to, the emptying of bins, general clearance and disposal of litter, cleaning and clearing of paths and hard surfaces, maintenance of street furniture, and the general tidiness of the area.

Outcome

A clean, safe, tidy, ready-to-use and appropriately-maintained area, with all unwanted material removed.

Tasks

The service provider shall:

- Clear the area of litter (grass area, path or shrub bed) prior to undertaking any maintenance task on that area
- Appropriately dispose of litter, recycling any items wherever and whenever possible
- Empty and clean bins, at the time specified, to ensure that they remain clean, do not smell or attract unwanted insects or animals, or become overfull or insanitary
- Prioritise sites so that those that are most littered, or become dirty quickest, are visited most often
- Submit a litter collection, cleansing and bin emptying schedule to the Authorised Officer at the beginning of every contract year
- Adhere to the schedule unless agreed otherwise with the Authorised Officer
- If deemed necessary to meet the stated outcome, clean all paths, hard surfaces, ditches and gullies at the same time as the general litter and refuse clearance is being carried out, by sweeping, blowing, raking or otherwise as appropriate to the surface and site conditions, removing all arisings from site and disposing of them appropriately
- Clear leaves and snow from the specified area
- Clean and maintain signs, gates, fences, bollards, benches, seats and other street furniture and all equipment provided to enhance visitors' experience or to ensure or improve their safety
- Report any damaged equipment, signs, bins, potholes, loose slabs, and leaking pipes as soon as they are found.

6.5 Graffiti

Environmental services are responsible for removal of graffiti in the park. Incidents are reported by the Parks Manager, Environmental services staff, FOBP group members and members of the public. Graffiti shall be removed from furniture, fittings, fences and play equipment as soon as possible by scrub cleaning, jet wash or by the use of solvents. Where cleaning methods fail to remove graffiti on painted areas, these shall be over-coated with a matching paint and bare timber shall be scraped clean and treated to match existing timber surface.

Broxbourne Council is committed to combating the negative impact of anti-social behaviour related activities, such as graffiti, have on the environment. The Council will remove all racist or offensive graffiti from Council-owned buildings and items including parks and open spaces furniture within one working day of it being reported.

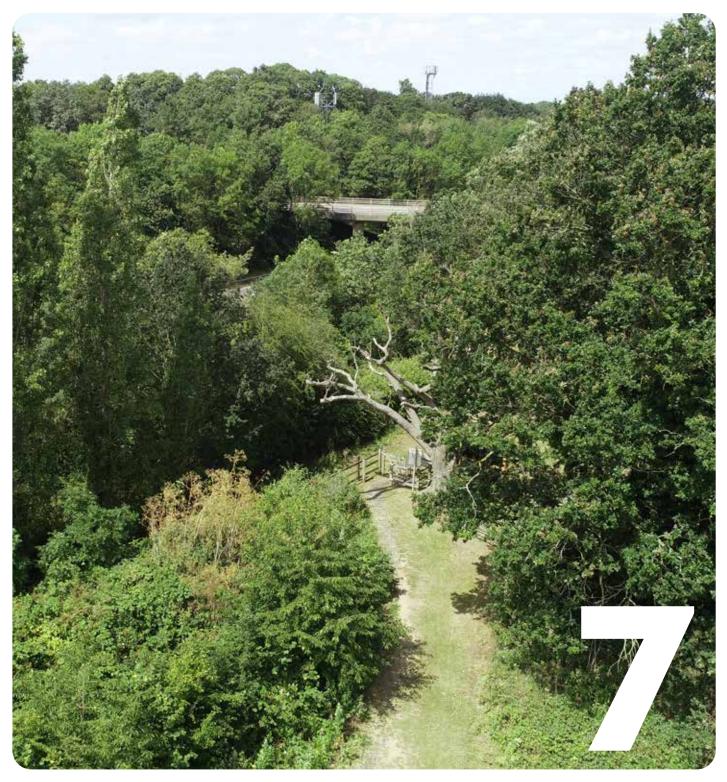

6.6 Car park

Car parking is available at the nearby Baas Hill Common site. Maintenance of the car park is the responsibility of Broxbourne Council. The Green Spaces Officer carries out an inspection of the car park and the path network on a biannual basis. Any defects are reported.

6.7 Reviewing the Management Plan

The Plan will be reviewed regularly, allowing time for it to achieve its goals, some of which will take a few years to accomplish in full. However, there may be changes in demands for some of the facilities within the site, resources available, management structures and in the operations and nature of the organisations using or influencing the management of the site which will necessitate a change in certain aspects of the Management Plan.

Reviews will be based on current baseline information, objective analysis of that information, and consultation with a wide cross section of the people working in and using the park.

APPENDICES

FOWOS 2001 –	S ACHIEVEMENTS SUMMARY	2007 11 Jul	Warling Ports (mulahing 2004 planting)

boundary of Cozens Grove, part of Tree o'clock

initiative

2011

March – Advised Lottery "Awards for All" had been successful for entrance improvements and the installation of a picnic table for the Disabled.

14 April – 1st AGM held

9, 10, 11 May – Working Parties – Mulching wildlife hedgerow and Ragwort Pulling

13, 14, 15 June - Ragwort pulling

15 September – Presentation of Green Flag Community Award (formerly Green Pennant Award) by Mayor E. Rowlands

2012

21 January – Coppicing Willows in 2nd Woodland Extension

28 January – Big Garden Birdwatch Walk

February / March - Installation of New Entrance, all weather walkway and installation of picnic table for Disabled and moving existing bench to new position by School boundary. Funded by "Awards for All" Lottery Grant.

10 April – Clearing and seeding around New Entrance

12 April – 2nd AGM – Talk given by June Crew

 $14/15\ \text{May}-\ \text{Working Parties}$ - Weeding and Mulching the Western Hedgerow

18/19 and 23/24 June 1 - Working Parties - Removal of Ragwort

13 September – Presentation of Green Flag Community Award by Deputy Mayor Bren Perryman.

11 October – Presentation of £100 donation to the Friends from Wormley Women's Institute.

24 November – On a very wet muddy day the completion of planting around the New Entrance Gate

2013

26 January – Big Garden Birdwatch

4 April - 3rd AGM

4 May – Volunteer working party weed and mulch western hedgerow.

 $24/25\ \mathsf{June} - \mathsf{Volunteer}$ working party to clear ragwort from meadow

10 August – Butterfly/wildflower walk led by June Crew

12 September – Green Flag Celebration Event, Well attended 1st Wormley beavers, cubs and scouts sowed wild flower seeds.

30 November – Coppicing a section of the woodland extension and lifting crown on self-set oaks. 1st Wormley Beavers, cubs and scouts attended.

2014

Third 5-year management plan produced covering 1/1/2014-31/12/2018

25 January – Big garden birdwatch 15 species recorded

29 March – Volunteer working party to weed/mulch hedgerow

17 April – AGM

23/24 June – Volunteer working party to clear Ragwort from meadow

19 July – Butterfly/wildflower walk led by June Crew

18 September – Green Flag community award celebration event. 1st Wormley cubs and scouts sowed wildflower seeds.

21 December – Volunteer working party to coppice another section of woodland extension.

2015

21 January – Wednesday volunteers onsite to coppice the North East corner

24 January – Big Garden Birdwatch 19 species recorded

28 March – Volunteer working party including 1st Wormley beavers, cubs and scouts to weed/mulch hedgerow

4 April – AGM

29 April – Wednesday volunteers onsite removing self set oaks from Eastern boundary, Haileybury students onsite to weed/mulch hedgerow.

16 May – Volunteer working party to paint furniture

3 June – Wednesday volunteers onsite to build bridges over ditches in Cozens grove

22/23 June – Volunteer working party to clear Ragwort from meadow

11 July – Butterfly/wildflower walk led by June Crew, new species Common spotted orchid discovered.

8 August – Seed day ley by June Crew. Wasp spider discovered and rescued from haycut.

17 September – Green Flag Community Award celebration event held, well attended. 1st Wormley beavers, cubs and scouts sowed wildflower seeds.

5 December – Volunteer working party coppiced section of woodland extension.

2016

30 January – Big garden birdwatch 18 species recorded

 $12\ March-Volunteer\ working\ party\ including\ 1st\ Wormley\ beavers,\ cubs\ and\ scouts\ to\ weed/mulch\ hedgerow$

7 April – AGM

14 May – Volunteer working party to clear access into Cozens Grove from Cozens Lane West

25 May – Coffee morning attended by over 30 people

26/27 June – Volunteer working party to clear ragwort

29 June – 116 student and staff volunteers from Haileybury School cleared 91 bags of Ragwort from meadow

9 July - Butterfly/wildflower walk led by June Crew

8 September – Green Flag Community Award celebration event

26 November – Volunteer working party to coppice section of woodland extension

2017

28 January – Big garden birdwatch 13 species spotted

25 March – Volunteer working party to clear entrance

6 April - AGM

27 May – Coffee morning – 4 new members recruited

26/27 June – Volunteer working party to clear Ragwort from meadow

20 July – Green Flag Community Award 1st Wormley beavers, cubs and scouts participated in a plant identification activity.

21 July – Parksherts Green flag event held at Cassiobury Park in Watford. Launched Parks herts app. Top Field is included

22 July – Minibeast event led by June Crew

1 November – Heritage Lottery Fund application submitted

18 November – Volunteer working party to coppice woodland extension section.

2018

8 January – Notification received HLF application successful, awarded £66k

9 January - New logo adopted

5 February – Drone filming took place part of HLF project

8 February – Press release on council website HLF Project

15 February – Article in Mercury HLF Project

19 July – Celebration event, Green Flag Community Award for 10th year

2019

2 March – Community litter pick on new Broxbourne and Wormley Circular Path

April / May – Installation of kissing gates on the new Broxbourne and Wormley Circular Path

June – Friends coffee morning and inaugural walk of the new path

June - Resurfacing of the car park completed

July – 'On Broxbourne's Doorstep' exhibition of textile art celebrating the completion of the restoration and habitat improvement project.

2020

June – Green Flag Community Award retained

Zoom meetings carried out at regular intervals during COVID restrictions.

2021

October – Green Flag Community Award retained.

Meetings carried out at regular intervals.

2022

30th April- Volunteer working party cleared entrance, pruned and litter picked.

June - Green Flag Community Award retained.

October- FOWOS were awarded Silver Standard under the CPRE Hertfordshire Awards 2022 programme.

Meetings carried out at regular intervals.

2023

January - FOWOS took place in the Big Garden Bird Watch, identifying 21 different species of bird

July - Green Flag Award retained

September - FOWOS celebrated their 21st Anniversary along with the Green Flag Award at their steel pan band music event in Top Field.

Installation of kissing gate to create entrance from new housing estate

2024

February – FOWOS held two working parties, activities included reducing sallows.

July – Green Flag Award retained.

August – FOWOS Green Flag Award celebration took place in Top Field.

Installation of footpath from new housing estate.

Meetings carried out at regular intervals.

CPRE HERTFORDSHIRE AWARDS 2022

Celebrating the achievements of individuals and groups who have worked to protect, promote and enhance Hertfordshire's countryside for the benefit of their local communities and the environment

SILVER STANDARD

presented to

Friends of Wormley Open Spaces

Appendix 7.2 - Pesticide Policy

PESTICIDES

Policy

The Council will use a variety of pest control methods so that the extent and toxicity of pesticides used is reduced. It will not use any pesticide containing UK "Red-List" or EC "Black-List" chemicals.

The Council will not use wood preservatives or wood treated with preservatives containing pentachlorophenol (PCP), lindane or tributyltin oxide (TBTO).

It will ensure that all pesticides are selected and used according to the requirements of the Control of Substances Hazardous to Health Regulations (COSHH 1988) and the Control of Pesticides Regulations (1986).

Broxbourne Council currently uses no insecticides and only use Glyphosate-based herbicide. Non-residual pesticides are always used.

Reasons

Pesticides are used to control unwanted weeds, insects and animals. They include herbicides, insecticides, rodenticides, and wood preservatives. Unfortunately, some of the most effective pesticides in common use are harmful to people or the environment. Illegal pesticides and the misuse of approved pesticides can be harmful to users, other people in the area and local wildlife. Nationally there are some 4,000 acute poisonings from pesticides each year. Pesticides are particularly dangerous if they enter water supplies. Just one teaspoon can contaminate the water supplies of 4,000 people for an hour. For these reasons the Government strictly controls the use of certain pesticides on the "Red" and "Black" lists. The Council no longer uses any of these chemicals. Several wood preservatives are also harmful to health and the environment.

Alternatives

Pesticides and herbicides are used for a variety of jobs. There are a number of alternative methods of pest control that can be considered before rushing to the spray gun. Two key principles are:

- · Prevention is better than cure
- Use the minimum treatment to control the pest

Highway weed control

Alternatives to the use of chemicals include: manual weeding of small areas, thermic weed control (flame, hot air or steam applied to weeds), and mowing on highway verges.

In or near water

Manual weeding may be suitable if volunteer labour is available. Grazing animals can control the spread of weeds, and shading sections of water can prevent the growth of waterweeds.

Parks and sports grounds

Physical control can involve manual weeding, mulching (where the ground is covered to prevent weeds) and the removal of dead plant material to avoid build-up of pests or their survival over winter. Mechanical mowing with the removal of grass cuttings is also an effective alternative.

Rodent and domestic pest control

Improvements to the cleanliness and hygiene of sites can prevent the spread of pests. Equally regular building repairs or the installation of barriers such as fly and bird screens can prevent pests entering premises. Manual traps or the use / encouragement of natural predator are alternatives to the use of dangerous chemicals.

Timber pest and fungal control

All timbers for new buildings must be treated off site prior to delivery. For existing buildings, only treat the infected area unless there are special reasons to do otherwise.

Using pesticides

If staff need to use a pesticide:

- Select the safest pesticide for the job. All pesticides must be Control Of Substances Hazardous to Health assessed
- Non-residual pesticides are always to be used instead of residual (long lasting) pesticides
- Try to choose a species-specific pesticide that will not damage harmless wildlife
- Use the minimum amount required
- Contractors and their employees must hold a Certificate of Competence as required under the Control of Pesticides Regulations 1986.

BROXBOURNE BOROUGH COUNCIL

PUBLIC SPACE PROTECTION ORDER No. 1 OF 2020

THE CONTROL OF DOGS

- 1. This Order may be cited as the **Borough of Broxbourne Public Spaces**Protection Order No. 1 of 2020.
- 2. The Borough of Broxbourne (the "Council") makes this Order under its powers contained in s.59 of the Anti-Social Behaviour, Crime and Policing Act 2014 ("the Act"), being satisfied on reasonable grounds that the activities set out in paragraph 5, in the location described in paragraph 4 of this Order and detailed in the schedule to this Order have had or are likely to have a detrimental effect on the quality of life of those in the locality, or it is likely that activities will be carried out within that area and have such an effect. The Council is also satisfied that the effect, or likely effect, of the activities is, or is likely to be, of a persistent or continuing nature and that these activities are unreasonable and justify the restrictions imposed by this Order and that it is in all the circumstances expedient to make this Order for the purpose of reducing anti-social behaviour in a public place.
- This Order comes into force at midnight on 30 July 2020 for a period of up to three years thereafter, unless extended by further order under the Council's statutory powers.
- 4. This Order applies to all land in the Borough of Broxbourne to which the public or any section of the public has access, on payment or otherwise, as of right by virtue of expressed or implied permission.
- 5. The activities described below are hereby covered as from the date of this Order.
 - (a) The failure to remove dog faeces by a person in charge of the dog from the designated land,
 - (b) Allowing a dog (excluding guide dogs) to be present in the following areas:
 - (i) All fenced children's playground and areas which are designated and marked for children's play
 - (ii) All fenced games areas e.g. tennis, ball courts, skate parks
 - (iii) Marked playing pitches, when in use for playing sports

Any person in charge of a dog who takes it onto, permits it to enter or remains on the specified land is guilty of an offence.

6. Section 67 of the Act states that it is an offence for a person without reasonable excuse:

- (a) To do anything that the person is prohibited from doing by a public spaces protection order or,
- (b) To fail to comply with a requirement to which the person is subject under a public spaces protection order.

A person guilty of an offence under section 67 of the Act is liable on summary conviction to a fine not exceeding level 3 on the standard scale.

A person does not commit an offence under section 67 of the Act by failing to comply with a prohibition or requirement that the local authority did not have power to include in the public spaces protection order.

A person guilty of an offence under conditions a or b above, under section 67 of the Act is liable on summary conviction to a fine not exceeding level 3 on the standard scale, or a fixed penalty notice of £100.

CHALLENGING THE VALIDILTY OF ORDERS

An interested person may apply to the High Court to question the validity of this Order and an interested person means an individual who lives in the restricted area or who regularly works in or visits that area. Any such interested person may apply to the High Court within six weeks from the date on which this Order was made on the grounds that the Council did not have the power to make the Order or to include particular prohibitions or requirements imposed by the Order or that a requirement under Chapter 2 of the Act was not complied with in relation to this Order.

SCHEDULE OF RESTRICTED AREAS

- (a) All public rights of way/footpaths, pavements, flower beds, shrub areas and grass verges adjacent to carriageways.
- (b) All pedestrianised areas
- (c) All parks, open spaces and children's play areas
- (d) All sports fields
- (e) All greens, verges flower beds and other open areas on any housing estates in the borough
- (f) All town greens
- (g) All cemeteries
- (h) All parts of the Lee Valley Regional Park within the Broxbourne Borough Council district
- (i) All allotments
- (i) All public car parks

Appendix 7.3 - Green Flag Achievements

2009. Friends of Wormley Open Spaces submitted the first application for a Green Pennant award and were successful. The site retained this award continuously until 2011 when the award changed its name and became the Green Flag Community Award. Top Field and Cozens Grove Local Nature reserve has received this award every year since then.

Appendix 7.4 Flora and Fauna

Flora recorded in field:

False oat-grass (Arhenatherum elatius), sweet vernal-grass (Anthoxanthum odoratum), Yorkshire fog (Holcus lanatus), red fescue (Festuca rubra), meadow fescue (Festuca pratensis), creeping buttercup (Ranunculus repens), meadow buttercup (Ranunculus acris), common field horsetail (Equisetum arvense), cock's-foot grass (Dactylis glomerata), hogweed (Heracleum sphondylium), timothy-grass (Phleum pratense), small-leaved timothy-grass (Phleum bertolonii), white clover (Trifolium repens), red clover (Trifolium pratense), smooth tare (Vicia tetraspermum), field bindweed (Convolvulus arvensis), creeping thistle (Cirsium arvense), hoary ragwort (Senecio erucifolius), common ragwort (Senecio jacobaea), curled dock (Rumex crispus), broad-leaved dock (Rumex obtusifolius), common knapweed (Centaurea nigra), (Centaurea sp+), greater bird's-foot trefoil (Lotus uliginosus), foxtailgrass (Alopecurus sp#), common rye-grass (Lolium perenne), pedunculate oak (Quercus robur), greater plantain (Plantago major), ribwort plantain (Plantago lanceolata), goat's-beard (Tragopogon pratensis), rough hawkbit (Leontodon cf hispidus), yarrow (Achillea millefolium), mugwort (Artemisia vulgaris), rosebay willowherb (Chamerion angustifolium), horse chestnut (Aesculus hippocastanum), soft rush (Juncus effuses), dog rose (Rosa canina), common mouseear (Cerastium fontanum), cow parsley (Anthriscus sylvestris), hairy oat-grass (Helictotrichon pubescens), horse-radish (Armoracia rusticana).

(+ possibly a hybrid or alien – had flowers similar to C. nigra, but leaves similar to C. scabiosa – quite distinct from the rest of C. nigra present) (# not identified to species – appeared very small for A. pratensis)

Fauna:

Grasshoppers - Roesel's bush-cricket, lots of grasshoppers (not identified to species). Butterflies - Meadow Brown, Gatekeeper, Red Admiral, Common Blue, and Skippers (not identified to species).

Flora recorded on western bund:

Common nettle (Urtica dioica), false oat-grass (Arhenatherum elatius), horse-radish (Armoracia rusticana), creeping thistle (Cirsium arvense), hemlock (Conium maculatum), hogweed (Heracleum sphondylium), mugwort (Artemisia vulgaris), cock's-foot grass (Dactylis glomerata), field bindweed (Convolvulus arvensis), hairy oat-grass (Helictotrichon pubescens), yarrow (Achillea millefolium), barren

brome-grass (Bromus sterilis), broad-leaved dock (Rumex obtusifolius), upright hedge-parsley (Torilis japonica), common couch-grass (Elymus repens), black horehound (Balota nigra), common mallow (Malva sylvestris).

South-western Edge of Site

Pedunculate oak (Quercus robur), sessile oak (Quercus petraea*), hornbeam (Carpinus betulus), hawthorn (Crataegus monogyna), blackthorn (Prunus spinosa), ash (Fraxinus excelsior), crab apple (Malus sylvestris), dog rose (Rosa canina), bramble (Rubus fruticosus), common nettle (Urtica dioica), wood avens (Geum urbanum), ground ivy (Glechoma hederacea), common figwort (Scrophularia nodosa), male fern (Dryopteris filix-mas), wood dock (Rumex sanguineus), cleavers (Galium aparine).

Flora recorded along eastern half of lane:

Hornbeam (Carpinus betulus), pedunculate oak (Quercus robur), herb Robert (Geranium robertianum), red campion (Silene dioica), remote sedge (Carex remota).

Cozens Grove (south-eastern corner of site)

Flora recorded from Cozens Grove:

Hornbeam (Carpinus betulus), pedunculate oak (Quercus robur), ash (Fraxinus excelsior), hawthorn (Crataegus monogyna), blackthorn (Prunus spinosa), holly (Ilex aquifolium), field rose (Rosa arvensis), bramble (Rubus fruticosus), greater stitchwort (Stellaria holostea), Yorkshire fog (Holcus lanatus), hogweed (Heracleum sphondylium), ivy (Hedera helix), wavy hair-grass (Deschampsia flexuosa).

Fauna: Speckled wood butterfly, grey squirrel.

South-eastern Edge of Site

Flora recorded along south-eastern hedge:
Hawthorn (Crataegus monogyna), pedunculate oak
(Quercus robur*), sessile oak (Quercus petraea),
ash (Fraxinus excelsior), hornbeam (Carpinus
betulus), blackthorn (Prunus spinosa), crab apple
(Malus sylvestris), copper beech (Fagus sylvatica var
purpurea), bramble (Rubus fruticosus), hogweed
(Heracleum sphondylium).

Northern Edge of Site

Flora not recorded, but species present appeared to be much the same as ranker areas of field, western bund and other hedges. Would need detailed mapping to determine accurate position of boundary.

Flora recorded along northern boundary:

Fleabane (Pulicaria dysenterica)

Prepared by English Nature

G. Wyatt 30 July 2003

Yellow rattle

(English common names added 3 November 2003)

Since this species list was compiled, several other species have been identified in the meadow. These have either arrived through natural restoration or by seeds which have been scattered through the meadow at Green Flag celebration events since 2009.

Cut leaved crane's – bill Geranium dissectum
Cats'ear Hypochaeris radicata

Common vetch

Tufted vetch

Musk mallow

Black medick

Agrimony

Ladies' bedstraw

Vicia sativa

Vicia sativa

Vicia sativa

Vicia sativa

Aliva moschata

medicago lupulina

Agrimonia eupatoria

Galium Verum.

Rhinanthus minor

Appendix - 7.5 Bird Species in Top Field, Cozens Grove, Par 3 Golf Course and Wormley Playing Fields

Commonly Seen	Occasionally Seen	Have been seen	Notes
Black Headed Gull	Grey Heron	Hobby	
Common Gull	Mute Swan	Little Owl	Little Owl used to roost in School
Wood Pigeon	Canada Goose	House Sparrow	playing field.
Green Woodpecker	Greylag Goose	Wheatear	Wheatear seen resting on cricket
Greater Spotted	Mallard	Spotted Flycatcher	square during migration
Woodpecker			Spotted flycatcher not seen for at least 5 years
Swallow	Sparrowhawk	Tawny Owl	
Wren	Kestrel	Buzzard	First seen March 2012

Goldfinch			
27 species	17 species	9 species	Total 53

CONSTITUTION

The group shall be called the Friends of Wormley Open Spaces (FOWOS)

Objectives

- To promote health and well-being through leisure and exercise and involve more local people in the site
- To promote conservation, education and involvement of the community to enhance the site
- To increase FOWOS members and volunteers to assist with maintenance and management of the site
- To increase biodiversity.

To Fulfil Objectives by

- Organising and participating in conservation tasks
- Assisting with activities and events, also increasing awareness within the local community
- Applying for community based funding to enable identified projects to be undertaken
- Liaise as appropriate with the Borough of Broxbourne Parks Manager and other bodies
- Hold regular meetings to identify any management, maintenance and improvement issues and decide plan of action
- Assist with drawing up and regular review of management plans.

Members

Membership of FOWOS shall be open to anyone who is interested in taking an active part in the objectives and work carried out by the group and has paid the appropriate subscription.

Equal Opportunities

FOWOS activities will be conducted in such a way that no person receives less favourable treatment on any grounds.

Committee Business

FOWOS affairs will be controlled by a committee elected from and by the members of the group. The committee will meet at agreed intervals to discuss its activities. Minutes will be taken at each meeting and will be available to all members.

Finance and Subscriptions

A bank account is to be opened at National Westminster Bank, Hoddesdon branch, in the name of the group. Payments are to be signed by any two authorised signatories. Authorised signatories will be the Chairman, Treasurer and Secretary of the group, until further notice.

Accounts are to be kept by the Treasurer, submitted to independent inspection and approved at an Annual General Meeting.

Annual subscriptions will be payable at a rate of £3 per individual and £5 per couple, renewable on 1 January annually with effect from 2010.

Should FOWOS cease to exist, any funds remaining, after payment of any outstanding liabilities, will be transferred to a registered charity.

Insurance

Members of FOWOS are covered by the Borough of Broxbourne Personal Accident and Public Liability insurance for volunteers undertaking any tasks onsite.

Health and Safety

All members of FOWOS shall through their actions ensure the health and safety of others.

Changes to the Constitution

Alterations to this Constitution shall only be made with the consent of a majority of the members of FOWOS.

This Constitution (based on a draft provided by Countryside Management Service) was approved by the members of the Friends of Wormley Open Spaces on 12 October 2009.

Appendix 7.7 – Action Plan 2024

All dates in the action plan are subject to change, depending on resources and funding.

Field Assessment Comments

Criteria	Strengths	Recommendations
A Welcoming Place	<u>'</u>	
Welcoming	The major entrance is in good condition and well signed.	Entrance to new development needs further improvements, now being sought.
Good and safe access	External access is good.	All paths are reasonably good, though some may be affected by recent Thames Water work, TW to be chased if necessary.
Signage	Excellent signage at Baas Lane.	Signage at new entrances needs some improvement.
Equal access for all	It is fine for walkers.	See what can be done to provide better access from the minor entrances, especially in wet weather.
Healthy, Safe & Secure		
Appropriate level of facilities and activities	The facilities are well suited to the nature conservation features of the site.	None
Safe equipment and facilities	Existing facilities suit the site.	
Personal security	No issues were seen.	None

Control of Dogs/Dog fouling	No sign of problems.	None
Well maintained and Clean		
Litter and waste management	All was well.	None
Overall standard of maintenance	Very good, for both the volunteer and the council's work.	None
Graffiti and vandalism	All seemed good, only the most minor issues.	None
Environmental Management		
Sustainable materials use	Volunteer and council actions were ok.	Not all materials seen were ideal from a sustainability. Much of this however were due to Thames Water, with rights over the land.
Waste recycling and minimisation	Excellent on site. Otherwise largely dependent on the council's general practices, which appear quite adequate.	None
Chemical Use	No sign of chemical use was seen, though it is accepted that the council may need to use it judiciously if necessary.	
Peat use	N/A	
Biodiversity Landscape & He	ritage	I
Conservation of landscape & historic features	Very good, especially given the detail of extending the conservation to influence neighbouring plots on land. This includes both with respect to becoming built up, or changes to adjoining spaces (e.g. nearby farm fields).	None
GFCA Feedback 2021 Issue 4	J/Operations/Green Flag	n/year/Master documents 2021 Jan 2021

Conservation of biodiversity	Excellent. There are varied features, including the major area of meadow, the woodland, and various hedgerows and screens.	Investigate options to increase biodiversity, e.g. by varying cutting regimes in different areas, or by temporary closures of some areas.
Community Involvement		
Promotion of green space / project	There was some information on the Council's website.	The link from the Parksherts website to the relevant site specific website did not work. It was reported as https://ex.broxbourne.gov.uk/leisure-parks-and-green-spaces/top-field-cozens-grove .
Links to the wider community	The Council and the community group have links to relevant bodies. A record of cooperation with other bodies and landowners is present.	None
Involvement in decision making	Strong evidence of cooperation between council and community group in managing the site, also reflected in documentation.	None
Involvement in operations	As above.	None
Appropriate provision for the community	As seen, the Council and volunteers provide relevant facilities within their limited resources.	There is potential for further development of green initiatives on this site. An examination could be carried out on what is possible with the existing community input.
Management / achievements		
Innovation and creativity	A good deal has been done to improve the site. The group tries to be involved in scrutinising and responding to local planning applications, so as to protect this and other local green spaces.	There are opportunities to extend and add to biodiversity and nature conservation however.
Resources secured / used	Community group has been successful in bringing in external funds.	None

GFCA Feedback 2021 Issue 4 J/Operations/Green Flag/year/Master documents 2021 Jan 2021

16.0 PARKSHERTS – HERTFORDSHIRE PARKS WEB PROJECT

16.1 Background and Challenge

<u>ParksHerts</u> originated from the Hertfordshire Association of Cultural Officers Parks Officers Group (HACO) which recognised that there was a lack of consistent, accessible and good quality online information about the county's parks and open spaces. This is a particular challenge for a county such as Hertfordshire where park ownership is spread across administrative areas.

Hertfordshire also faces challenges to address the levels of obesity and physical activity within the population. 62.8% of Hertfordshire adults (2013-15) and 36.7% of children in year 6 (2015) were classified as overweight or obese with only 58.7% of adults classed as physically active (2015). (source: Public Health England. 2016. Public Health Outcomes Framework (Online)).

16.2 The Project

ParksHerts provides an innovative solution to these challenges. It's a mobile-first website application providing a single information point for over a hundred of Hertfordshire's parks and

open spaces from recreation grounds through to woodlands and award winning flagship parks, irrespective of administrative ownership. It provides a way for people to discover and enjoy sites they know and those that they haven't yet discovered, whilst also supporting people to make outdoor exercise part of their everyday lives.

Funding for the project was secured from Hertfordshire County Council Public Health, all ten Hertfordshire District/Borough Councils and one Parish Council. Support from partners has been both financial and as officer time from communications teams, public health officers and from parks teams who will maintain the information on their own parks into the future. Hertsmere Borough Council led the project on behalf of the partnering authorities through the specification, procurement, design, data entry and training stages and will continue to be the overall administrative contact point.

<u>ParksHerts</u> is a clear demonstration that cross county projects really can and do work and a great tool to encourage greater park use and promote our parks, including Green Flag sites.

To remove barriers to access it is important that the site is as user friendly as possible. To support this, online and face to face consultation was undertaken.

Visit the ParksHerts web application today - www.parksherts.co.uk - and find your perfect park!

You can also like us on Facebook: facebook/ParksHerts, or follow us on twitter: @ParksHerts and Instagram: ParksHerts or email parksHerts@hertsmere.gov.uk

Key features of the site include:

- A simple, attractive design with generic appeal that changes with the seasons.
- A mobile friendly site which can be used on desktops, tablets and mobile devices reflecting the desire from users to research at home and whilst out and about.
- The same basic info on each park (prioritised via user consultation and feedback).
- Ability to filter parks by categories including who is going to the park, what activities you'd like to do and the facilities offered.
- Activity routes are marked on the maps ranging from easy access (pushchair and wheelchair friendly) through to running routes, nature trails and orienteering. Step counts are provided for each.
- How to find the way in to the park: on foot, via public transport and by car. Exact car park locations are provided with links to google maps.
- Ability to promote park events via specific 'events' area.
- Clickable points of interest.
- Ability to focus on what's important by personalising the points of interest that appear on the map.
- I'm in this park button provides a GPS 'where am I' location.

16.3 Outcomes

In the first six months since the site was officially launched, there has been:

- 6,200 unique users
- 8,500 sessions
- 30,000 page views
- 60% of user's access through mobile or tablet indicating potential usage whilst in the park.

The most popular pages are the parks search page followed by the events page. Visitor numbers can checked and peaks in usage can be linked to particular tweets or promotional activities. Seasonal reports will collect user numbers.

16.4 Promotion and Social Media

The <u>ParksHerts</u> website application was launched to the public at the Hertfordshire Green Flag Award event held at Cassiobury Park, Watford on 21 July 2017. The press release can be found in Appendix 8.

Publicity and promotion of the site is a partnership effort coordinated bγ communication professionals from the participating councils, using facebook, and Instagram, resident's twitter websites magazines, partner and newsletters.

Links between the website and participating council's websites are in place to help drive traffic to the site.

Publicity material available includes roadside banners, posters and branded bags and water bottles. These have been distributed between partners for use in the parks or at events.

Since the launch, a blog feature has been created which is proving to be a useful way to highlight specific parks or activities taking place in the parks which can be promoted.

An advert for site can be found on the 2017/18 bus timetables across the whole of Hertfordshire.

- 25% found us via search engines
- 24% came directly
- 40% linked through via social media

Social Media techniques to be used:

- On Twitter posts use the daily hashtags e.g. Monday Motivation, Tip Tuesday this widens the audience considerably.
- Tag in more popular twitter users has led to retweets
- Pick up on relevant news stories
- Link through to wider, popular events e.g. Health Walks known events and link directly through to the right page on the site
- Use animation, visual representations of the site, linked to the time of year
- Use real photos from the Hertfordshire parks

16.5 Next Steps

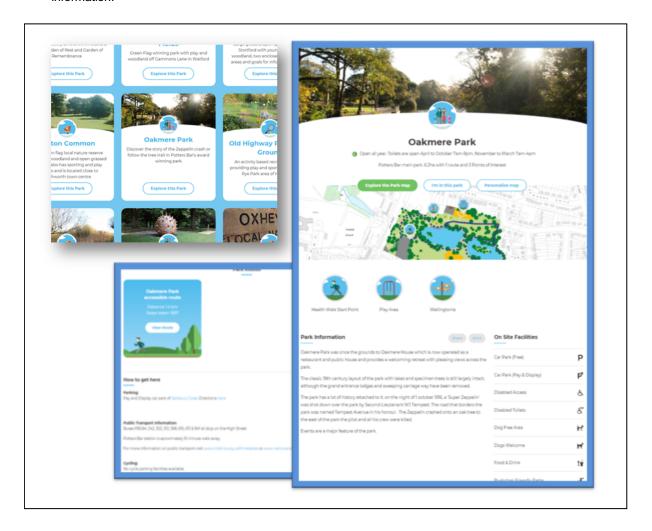

Three key aims have been identified for 2018 to further develop the web application and ensure that people use and re-use ParksHerts.

- **Keep going and keep growing**' site to be kept up-to-date with new data. Additional sites to be added, from existing partners as well as expansion to other parks providers within the county. New opportunities of features within the site are also possible and will be added as appropriate within the budget.
- 'Governance' a 'board' of key members from the partnership will be formed to take key decision over future developments, costings and ensure continual input from all partners.
- Widen usage' the coding and design is owned by the ParksHerts partnership. Opportunities exist to for other authorities or partnerships of authorities across the country to 'purchase' the coding at a fraction of the original cost. Take up would help to ensure that ParksHerts is fully sustainable but more importantly promote the huge benefits that's parks offer to people's everyday lives across the country.

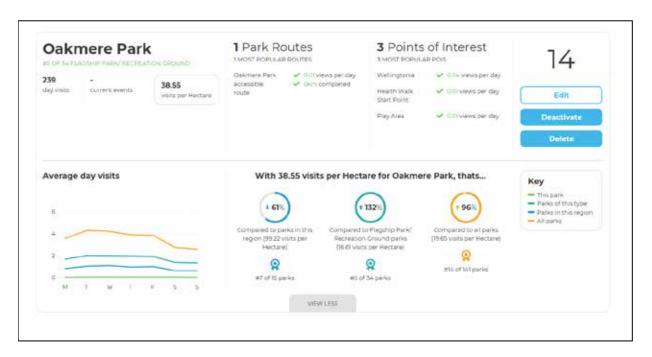

16.6 Oakmere Park on ParksHerts

By using the filters, users are able to find the park that best suits their needs and can sort alphabetically, by popularity or by nearest.

The park can then be selected which opens up an easy to use specific park page with opening times, an interactive map showing points of interest and routes, text information, features, routes and directional information.

The site also contains a simple back office administration system for parks managers. This allows any changes to the park to be easily updated but also allows statistics to be collected. These show visitor numbers to the park, equating visitors numbers per hectare (providing comparable ranking to other parks in the district or 'type' of park), route completion and the most popular points of interest. It is envisaged that this data will be able to assist future management decisions, particularly with identifying the future needs of points of interest/parks features.

The above stats show that 239 users have visited the site, ranking the park as the 14th most popular, as well as the 7th in Hertsmere and the 5th Flagship. As the data builds up over a longer period of time, day visits and points of interest views will show trends and more accurate usage and enable a wider range of reports to be generated.

Do not put hands near eyes/mouth. Volunteers and children should not be involved with the collection of dog faeces. Practice good hygiene – wash hands as soon as possible. Welfare facilities to be carried include wipes, water, paper towels. First aid kit to be carried. First aider present when working with volunteers. Radio and/or mobile telephone carried If skin is cut or pierced accidentally by potentially infected material, wash thoroughly with clean water and approved wipes and seek medical advice immediately.	Working alone is not normally permissible, unless approved by site/task specific RA. A First Aider (not the person at risk) should be present. A radio or mobile telephone must be carried, and regular contact with 'base' maintained. If bga or pollution is present in the worksite postpone the task. Seek advice on its removal, consult the Environment Agency. If bga or pollution is present, but can be avoided, clearly define and if possible mark out the task area and work inside this area. Cover all wounds with a waterproof dressing. Tetanus vaccination must be up to date Wear rubber, or pvc gloves. Wash hands before touching eyes, face, mouth, and eating or smoking.

Volunteers and visitors to be (general briefing)

- Informed that they should be aware of each other's' safety and what others are doing around them at all times, indeed they have a duty of care to each other.
 - Warned to secure personal belongings at all times.
- Asked to keep work area tidy to prevent trips and falls.
- Asked to use a tool depot for tools not in use so these are stored safely in one place and out of the way during work.
- Told to maintain a safe working distance two tools lengths plus two arms lengths from the nearest person.
 - Told to alert a supervisor if anything they find that is potentially dangerous.
- Told to discuss allergies (especially insect stings) and possible health issues relating to the work with a supervisor to evaluate risk and controls to put in place.
 - At one-day events where volunteers and visitors are working in the park, full tools use and safety talk will be given at the start of the day
- And they will be informed at the start of hand washing facilities and toilet arrangements.

boundary	Site to be added to the ancie	nt woodland inve	entory.
Original Site Description:	corner. The grassland is do elatius), Sweet Vernal-grass Fog (Holcus lanatus) and so Meadow Buttercup (Ranunc nigra), Bird's-foot Trefoil (Lanatural Pedunculate Oak (Qacoppice woodland. The grosome Wood Meadow-grass hedges are present to the lanart from along the south lane. Wildlife Site criteria:	ominated by Falses (Anthoxanthu upports several culus acris), Con otus corniculatu III wood, Cozens Quercus robur) Found flora is very s (Poa nemoralis boundary but the ern edge where Mosaic; grasslateral canopy and	nmon Knapweed (Centaurea us) and Common Sorrel s Grove, is a remnant semi- dornbeam (Carpinus betulus) y sparse though does support s). Remnants of laid Hornbeam ere are no significant banks; the wood abuts an old sunken

Overall General Site Description:

<u>Top Field:</u> semi-improved neutral grassland with slight calcareous influences, previously cultivated in WW2. MG1d grassland with patches of MG5, characterised by a grass-rich sward, dominated by Common Bent (*Agrostis capillaris*), Sweet Vernalgrass (*Anthoxanthum odoratum*), False Oat-grass (*Arrhenathrum elatius*), and Yorkshire-fog (Holcus lanatus). Areas with increased Crested Dog's-tail (*Cynosurus cristatus*), and Knapweeds (*Centaurea nigra* sl). Smooth Tare (*Ervum tetraspermum*), Common Vetch (*Vicia sativa*), Hairy Tare (*Ervilia hirsuta*), and White Clover (*Trifolium repens*), with Greater Bird's-foot-trefoil (*Lotus pedunculatus*) was repeatedly found. Patches of Oxeye Daisy (*Leucanthemum vulgare*), Yarrow (*Achillea millefolium*), and Lesser Stitchwort (*Stellaria graminea*). Scattered were Rough Hawkbit (*Leontodon hispidus*), Ribwort Plantain (*Plantago lanceolata*), and Common Sorrel (*Rumex acetosa*). A little Yellow-rattle.

<u>Cozens Grove:</u> Semi-natural ancient woodland inventory site with Hornbeam (*Carpinus Betulus*) extant coppice with Pedunculate Oak (*Quercus robur*) standards. Western margin had been extended through the growth of secondary woodland. Sunken holloway is a notable landscape feature. Ancient woodland indicator species present included Wood Meadow-grass (*Poa nemoralis*), Remote Sedge (*Carex remota*), Grey Sedge (*Carex divulsa* subsp *divulsa*), Pendulous Sedge (*Carex pendula*), Enchanter's-nightshade (*Circaea lutetiana*), Male-fern (*Dryopteris filix-mas*), and Stinking Iris (*Iris foetidissima*).

Compartment 1: Top Field

Description:

6-fig central Grid Ref: TL360066 Top Field appeared to be semi-improved neutral grassland with slight calcareous influences. The field was ploughed during WW2, and potatoes were grown. The community varied across the site, which is more specifically related to moisture levels. This could be seen in aerial images of the field taken during dry summers. The meadow is cut twice, firstly at the end of June to July, and cuttings are collected. This is repeated at the end of September with cuttings left in place.

The NVC communities present most closely resembled MG1d *Arrhenathrum elatius*, *Pastinaca sativa* grassland, but in patches had progressed to finer MG5 *Cynosurus cristatus-Centaurea nigra* grassland, a priority habitat grassland. MG1d is typical for grasslands which have been formerly ploughed, but as the surface deposits were mixed and varied slightly across the site, it was quite a general fit. The most consistent graminoids were Common Bent (*Agrostis capillaris*), Sweet Vernal-grass (*Anthoxanthum odoratum*), False Oat-grass (*Arrhenathrum elatius*), Yorkshire-fog (*Holcus lanatus*), Red Fescue (*Festuca rubra*), and Cock's-foot (*Dactylis glomerata*).

There were areas with increased Crested Dog's-tail (*Cynosurus cristatus*), where it was joined with patches of Knapweeds (*Centaurea nigra* sl). In other areas, the False Oat-grass increased. The forbs content varied from 10 to 50% but was typically 20%. The community composition was within the typical range for MG1d; however, it lacked the species diversity typically seen in an average MG5 community (Rodwell, 1992). This is entirely expected for the level of disturbance this grassland has experienced and helps identify missing species which have not been regained.

The hybrid Knapweed present mostly had the morphology of *Centaurea nigra*, with a little introgression by *C. jacea*, and *C. debauxii. C. nigra* has an earlier flowering time, so it is preferentially selected over later flowering *C. debauxii* with the June/ July cutting time. There was also a more clearly mixed hybrid Knapweed. There was a high representation of nitrogen-fixing leguminous plants with much Smooth Tare (*Ervum tetraspermum*), Common Vetch (*Vicia sativa*), Hairy Tare (*Ervilia hirsuta*), and White Clover (*Trifolium repens*). There were occasional patches of a Bird's-foot-trefoil cultivar (*Lotus corniculatus* var. *sativus*) which suggests some reseeding, quite possibly with a pasture mix to restore the field to grazing. Unusually, Greater Bird's-foot-trefoil (*Lotus pedunculatus*) was repeatedly found across the grassland, suggesting local dampness and field drains were likely installed after restoration to the grassland. Over time, these are likely to become broken and less effective.

In patches were Oxeye Daisy (*Leucanthemum vulgare*), Yarrow (*Achillea millefolium*), and Lesser Stitchwort (*Stellaria graminea*). Scattered were Rough Hawkbit (*Leontodon hispidus*), Ribwort Plantain (*Plantago lanceolata*), and Common Sorrel

(Rumex acetosa). Hogweed (Heracleum sphodylium) appeared regularly and Field Horsetail (Equisetum arvense) in patches.

Yellow-rattle grew in patches to the edges of paths and in a patch of shade where the grasses were weaker. They were identified as *Rhinanthus minor subsp. stenophyllus*, which is a subspecies associated with wet grassland and more northern latitudes. This is the second Hertfordshire record but is likely under-recorded. This subspecies makes it difficult for the Yellow-rattle to weaken the sward as it has a later flowering time, which is incompatible with the earlier growth of grasses in this meadow. This is why it occupies a more marginal position.

Areas which were less typical for the grassland were in the shade with an increase in Rough Meadow-grass (*Poa trivialis*), and in higher traffic path areas where Perennial Rye-grass (*Lolium perenne*) increased. There was the rare presence of Lady's Bedstraw (*Galium verum*) on the shorter, less-competitive sward of the path.

Current Management:

Cut and cleared June/ July, mowed late September.

Management prescription:

If the fertility of the meadow could be reduced, the communities could be pushed towards a more floristically rich and diverse priority grassland of MG5. This is done by cutting and collecting before nutrients in the grasses have returned to the roots. Use a second cut and clear at the end of September to intercept the growth peak for a second time. This is a form of proxy aftermath grazing. Invertebrate refuge strips may also be considered; grass areas are left unmown and then rotated around the meadow so that nutrients don't build up in any area.

Fields with a high representation of leguminous species are sometimes more difficult to drive towards a lower grass-dominated sward where less competitive plant species can thrive. Persistence does, however, succeed eventually. Cut some areas very short and scarify to create nucleation points for missing community elements. These could also spread scarcer species around the meadow, like Lady's Bedstraw and Yellow-rattle. If Yellow-rattle does not establish with the current subspecies, consider another source from a reliable supplier like Emorsgate.

It seems likely that the hydrology would support a pond, which would benefit local wildlife. His should be fenced to limit dog access, as topical flea treatments would limit the development of an invertebrate assemblage.

Compartment 2:

Cozens Grove

6-fig central Grid Ref: TL361065

Description:

Semi-natural ancient woodland with Hornbeam (*Carpinus Betulus*) extant coppice, most closely resembling NVC, W8 *Fraxinus excelsior – Acer campestre –Mercurialis perennis* woodland.

The woodland occupied an ancient inventory site centred on an ancient holloway. The western margin had been extended through the growth of secondary woodland.

Extant coppice Canopy

The canopy was dominated by early mature coppiced Hornbeams (*Carpinus betulus*) and scattered mature Pedunculate Oak (*Quercus robur*) standards. The Hornbeam had often been reduced to a single stem and the canopy was closed. Coppiced trees can have longer life spans than standard trees because they are constantly renewed with each successive regrowth. They are said to be immortalised if this cycle continues. Some of the Oaks were mature and had developed veteran features. At a lower frequency was Ash (*Fraxinus excelsior*) and an occasional fine Field Maple (*Acer camspetre*).

The holloway had lines of magnificent, coppiced Hornbeam interspersed with Oak and Field Maple.

Mid-layer

The mid-layer was very sparse from the effects of a dense, closed canopy and there was no evidence of deer browsing. It consisted mostly of Holly (*Ilex aquifolium*) and a little Common Hawthorn (*Crataegus monogyna*). Some of the Holly was dense, perhaps reflecting what has been described as the "evergreenation" of Herts woodlands. Global warming has produced warmer winters which in part renders the need to be deciduous less important. This then gives an advantage to evergreen shrubs and plants which can grow through the winter.

Field Layer

Under the dense canopy, the field layer was often sparse, with the base of the holloway obviously very wet in winter and consequently bare for the most part. The

high footfall through sections on the wet ground also contributed to a degree of compaction. Dog's Mercury (*Mercurialis perennis*) would have been expected but is easily lost through footfall and disturbance.

Where the canopy thinned, Bramble species (*Rubus fruticosus* agg.) emerged as part of the natural succession process within the secondary woodland. Here and in areas with more open canopy there was a small area of False-brome (*Brachypodium sylvaticum*) and Wood Meadow-grass (*Poa nemoralis*), and scattered Remote Sedge (*Carex remota*), Grey Sedge (*Carex divulsa* subsp *divulsa*), Pendulous Sedge (*Carex pendula*), Red Campion (Silene dioica). Enchanter's-nightshade (*Circaea lutetiana*), Male-fern (*Dryopteris filix-mas*), and Stinking Iris (*Iris foetidissima*). Some non-native Hybrid Bluebell (*Hyacinthoides x massartiana*) was found.

The higher level of disturbance within particularly the secondary woodland gave rise to species like, Rough Meadow-grass (*Poa trivialis*), Cleavers (*Galium aparine*), and more infrequently scattered Lords-and-ladies (*Arum maculatum*), Wood Avens (*Geum urbanum*), Herb Robert (*Geranium robertianum*), and Wood Dock (*Rumex sanguineus*).

Common Ivy (*Hedera helix*) gained a particular dominance on the south edge of the woodland. Ivy is again a species that grows unchecked in milder winters and can present conservation issues for both epiphytic bryophytes, lichens, and the field layer.

Ground Layer

There was a scattering of the calcicole moss *Kindbergia praelonga* and evading the calcareous groundwater on banks, some *Mnium hornum*.

Woodland boundaries

A ditch to the west of the woodland could have marked the original woodland extent. Around most of the woodland, there has been extensive hedge planting with native hedging mixtures. This has enclosed what would otherwise have been an open woodland boundary, therefore increasing the internal woodland humidity and reducing the temperature. Introduced and possibly naturally occurring species included Hazel (*Corylus avellana*), Common Hawthorn (*Crataegus monogyna*), Blackthorn (*Prunus spinosa*), and Dog-rose (*Rosa canina* agg.).

Current Management:

Hornbeams have been left uncoppiced on advice.

Management prescription:

This was surveyed at a sub-optimal time to check for the presence of ancient woodland indicator plants. There was some apparent soil compaction which could limit the development of the field layer. The extent of this was difficult to check in the summer with the receding spring vegetation. I would advise the volunteer group to assess this for themselves, if possible, and report back.

Keep an eye on the amount of Holly within the woodland, cutting back if necessary.

Check for any way to reinstate coppicing, particularly the fine coppices on the holloway banks.

Compartment 3:

Hedge boundary and ecotones

6-fig central Grid Ref: TL362066

Description:

The care with which the interior of the woodland had been protected with hedging was reflected on the exterior with a well-conceptualised management plan for its ecotone with the grassland.

Many of the components found in the woodland, with Hornbeam, Ash, and Field Maple, were at the back of the hedging and interspersed. The woodland margin tree of Goat Willow (*Salix caprea*) was joined by planted and natural Silver Birch (*Betula pendula*), Rowan (*Sorbus aucuparia*), Plum (*Prunus domestica*), and Italian Maple (*Acer opalus*), Hedging material included Hazel, Blackthorn, and Guelder-rose (*Viburnum opulus*). Red Osier-dogwood (*Cornus sericea*) had been included in

planting material, which does not possess the same wildlife value as native Common Dogwood (*Cornus sanguineus* subsp *sanguineus*).

The field layer was a combination of woodland disturbance and meadow species. As this was necessarily a more actively managed area with planting, it had some adventives with Sterile Brome (*Anisantha sterilis*), Creeping Thistle (*Cirsium arvense*), Hemlock (*Conium maculatum*), etc., and garden escapes like Horse-radish (Armoracia rusticana) and Broad-leaved Spurge (*Euphorbia platyphyllos*). Typical hedgerow plants like White Bryony (*Bryonia dioica*) and Hedge Bindweed (*Calystegia sepium*) fed into the shrubs.

In local damper areas, there were plants like Great Willowherb (*Epilobium hirsutum*), Square-stalked Willowherb (*Epilobium tetragonum*), Clustered Dock (*Rumex conglomeratus*), and Soft-rush (*Juncus effusus*).

Nettle (*Urtica dioica*) progressed to scrub, dominated by Bramble species, including *Rubus hindii*, with a diversity that ensured a long flowering season. Towards the entrance to Top Field the non-native Giant Himalayan Bramble (*Rubus armeniacus*) has appeared. This has an extremely fast growth rate with around 4 m per annum, creating management problems. Additionally, it flowers and fruits earlier, possibly reducing food availability at critical times, eg migration.

A wooded path had been cut alongside a line of Hybrid Black-poplar (*Populus* x *canadensis*) bordering the A10, with a similar scrub composition. Here, a single spike of Helleborine (*Epipactis* sp.) was found.

Current Management:

Rotational cutting of scrub blocks and undulation of the ecotone with the grassland to give a maximum interface for wildlife.

Management prescription:

Carry on with the excellent management but remove the Giant Himalayan Bramble. Take care that no further non-native species are accidentally added.

Invasive species:	List: Giant Himalayan Bramble.(proposed schedule 9 species)
Surrounding landuse:	Urban, pasture

Vascular Plant Species List:

Habitat photos:

Photo 1:

Formerly coppiced Hornbeam with selected leaders. At the edge of the secondary woodland, there was a better developed field layer. The mid-layer in this area was poorly developed because of the closed canopy.

Photo 2:

The sunken holloway had lines of magnificent, coppiced Hornbeam interspersed with Oak and Field Maple.

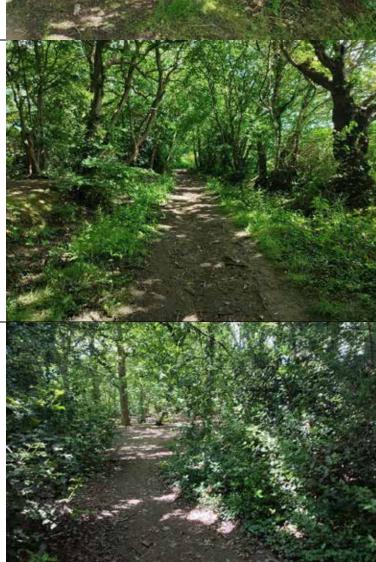

Photo 3:

Some thick bands of Holly developing. A likely combination of high footfall, wet conditions, and closed canopy limited the development of mid and field layers.
