

Site Visit 4 June 2026

Present: AJ Broxbourne, ST (HCC), LB (Legal Counsel)

Photos below taken (P2-19) with hatched area as shown in Enforcement Notice Plan ref ENF/26/0007.

The soil and materials observed within the hatched area do not appear to be different to the soil and materials observed outside of the hatched area. Throughout the entire site, you will see tractors/tyre marks suggesting activity throughout the whole site and a mix of materials throughout i.e. glass, bricks, hard plastics such as cones, wirings, metal rods, metal poles and large mounds of earth with much vegetation all over.

Outside of the hatched area as seen from P21 onwards, the mounds are larger, also characterised by much vegetation. The soil and materials contain in this area is similar to that observed outside with bricks, plastics and metal pieces located within.
